

Literature: A Boon to Technology

Dr. Alstynne victor. Kuraty

HOD, Department of Computer Science, K.L.E Society's J.G. COLLEGE OF
COMMERCE VIDYANAGAR, HUBBALLI

Abstract: Technology and Science is of vital importance and direct assistance in promoting literature, the reason, they create leisure by saving labour and time, by eliminating effort duplication. However in order to explain the technical concepts or their workability there must be a context which explain their progression and this can be achieved only with the help of (English) literature (the universal language code). Good literature makes a lasting impact on the human mind thus entertaining, instructing and edifying the spirit of human beings, it does not debase or corrupt or contradict the mind in any way rather bring out the thoughts in a flow of acceptance and it certainly does not lead to destruction of any section of mankind.

Introduction

The mirror of society is Literature and it is also a form of art, the art which brings out the actualness of one's emotions and social responsibilities. The study of English literature helps people in developing new ideas and new thinking nature about the world. It helps the individual to present themselves as educated/learned members of society thus involving the contemplation of the essence of society and how the individuals work within the cubicle of society's structure.

An understanding of how literature motivates the individual and how it reflects of the individual's society is something that ought to be high priority and consideration. It has a capability of bringing about different emotions and a general sense of overall well-being of an individual & the society. Literature also helps in learning stylistic and artistic conventions for communication and writing. Literature is an ice-breaking, enriching, eye-opening experience that helps in the construction of a valuable society.

The Role of Literature:

Literature plays two roles, an active/engaging role and a passive/reflective role. The active role depicts the action of reading. This role is a significant part of an individual's development. From

reading, an individual forms ideas and concepts about the world in which they live. These ideas and concepts, together, form into an ideology. From this ideology blooms up the individual motivation, action, and engagement. The second role is different from the first one, where observation is of high consideration than a thing done. The reflective role of literature is to show society the history of ideologies, of thought and of action, Thus allowing the individual to understand how a society functions and why it functions that way.

“Literature is thought provoking”, it allows the individuals to raise questions and further gives a deeper understanding of the issues and situations. It has a major impact on the societal development. It has groomed civilizations, altered political systems and exposed injustice. It gives us a detailed preview of human experiences, by allowing the individuals to connect on basic levels of desires and emotions.

Whereas Technology is concerned of speaking about, literature helps in aesthetic representation of the concepts, processing activities & procedures, in an understandable & interpretable format wherein a laymen too can understand how things actually work right from the backend till the frontend (output). Just as it has constructed societies since ages, it has constructed technology indirectly with its wide variants of expressible words and conceptual means of data portrayal. It paved way for authentication of elements in a spoken as well as in written format thus enriching knowledge, culture and employability. Literature not only opened the door towards globalization which leads to a wider and closer look on the culture but broke the barriers of all boundaries which separated the human race. It has a unique form and function which shapes the technology by making way for the techies to explore their minds in order to construct new technology and also explain it to the related management for its approval. It helps them in portraying the flow of data in the process and the process of data conversion to information.

Conclusion

Literature often creates a framework for communication of the technology thus invented, every technology when first introduced appears dangerous but it's the literature which reviews it and explain about its easiness, advantages and its workability helping or assisting the individuals to clearly understand how the technology actually works and how beneficial it is to the society helping them to adapt to it.
